

PhotoAtlas gives your photos geographic context.

Create your own tours.

Historic as well as contemporary photographs can tell wonderful stories about a community's heritage and development but can be difficult to organize and present in a meaningful manner. However, a mapped display of your photo collection offers a visual cohesiveness that gives the viewer a better understanding of the displayed site and its relationship to the surrounding world.

PhotoAtlas from Northern Micrographics does just that. It lets you publish your photo collections to the web giving them geographic context using applications based on Microsoft's Bing Maps for Enterprise.

User Friendly

You begin with a map interface showing markers on specific locations. Click on a marker and you're taken to photos associated of that location. Moving around the map is easy using standard browser point and click gestures. Buttons on the home page of PhotoAtlas will take you to a specific address, start you on one or more pre-defined tours or simply take you to a favorite location.

Once you've clicked on a marker, the photograph is displayed along with any associated metadata or other descriptive text. Multiple photographs associated with the same point are displayed as thumbnails and can be accessed simply by clicking on them.

Administrator Friendly

Administrative tools allow the site administrator to define virtual tours that highlight specific points of interest (POI) along a route. The administrator can add or delete tours, add or delete POI's on a tour and can reorder POI's so that the tour follows a specific route. POI's can also be moved by the administrator to increase the accuracy of the geographic location.

It's easy to add, delete or change the photos and data in the PhotoAtlas database using the included database administration tool.

Display the full size photo in a separate window

PhotoAtlas Features

- Simple web browser application using standard point and click functionality
- Customizable description and metadata fields
- Compatible with your Windows 2000/2003/2008 server and most popular browsers
- Standard Windows print controls
- Administrative control module allows adds/deletes/changes for photos, descriptions and metadata

Ready for Your Web Server

PhotoAtlas is ready to install on your web server and is compatible with your Windows 2000/2003/2008 web server running MS SQL Server*, MS IIS and MS .NET Version 2.0. Web browser support includes Microsoft Internet Explorer 7 and 8, FireFox 3, Netscape Navigator 9, Google Chrome 1.0 and Opera 9.6.

No Experience Necessary

Because PhotoAtlas is a browser-based application, it allows your patrons to “point and click” their way through your photo collections. There’s no learning curve or specialized knowledge required.

Try the Demo

Call us for more details. Or see for yourself with our live PhotoAtlas demo at <http://demo.nmtvault.com/PhotoAtlasLPL>.

Try it today!

**PhotoAtlas will run on SQL Server Express Edition, Microsoft's free edition of SQL Server*
